

# Simple Regression Analysis

*Liang Hao*

*10/7/2016*

## Abstract

In this report we reproduce the main results displayed in section 3.1 Simple Linear Regression (chapter 3) of the book *An Introduction to Statistical Learning*.

## Introduction

The overall goal is to provide advice on how to improve sales of the particular product. More specifically, the idea is to determine whether there is an association between advertising and sales, and if so, develop an accurate model that can be used to predict sales on the basis of the three media budgets

## Data

The Advertising data set consists of the *Sales* (in thousands of units) of a particular product in 200 different markets, along with advertising budgets (in thousands of dollars) for the product in each of those markets for three different media: *TV*, *Radio* and *Newspaper*.

## Methodology

We consider one media from the data set, *TV*, and study its relationship with *Sales*. For this purpose, we use a simple linear model:

$$Sales = \beta_0 + \beta_1 TV$$

## Results

## Conclusions
